VaR 99% 74,324, **ES 97.5%** 72,249 (EUR, positive = loss). Sum of standalone VaR 99%: 223,128; diversification benefit 148,804; delta-gamma VaR 99% 75,048, ES 97.5% 72,382. ES and VaR are at different confidence levels, so ES can be below VaR. Bootstrap 90% intervals: VaR 99% 67,380 to 77,789, ES 97.5% 65,093 to 77,131 (VaR rests on one order statistic, ES on an average, so VaR is noisier).

Vol proxy (EWMA, lambda 0.94)	Level	1-day change
CAC40	13.8%	+0.34 pts
DAX	17.2%	+0.85 pts
FTSEMIB	20.0%	+2.34 pts
SX5E	16.1%	+1.39 pts

Notes, sources and simplifications

- Vol proxy (a): option vols are EWMA realized vols (lambda 0.94), not implied vols. Realized vol usually sits below implied vol (variance risk premium), and skew is ignored, so option values are likely understated vs market, most for the long out-of-the-money puts.

- Vol proxy (b): the EWMA vol change of a day is driven by that day's squared return, so vega P&L; and delta/gamma P&L; are not independent. On big-move days the omitted vanna/volga terms dominate the unexplained P&L; (diagnostic column), and the VaR vol shocks rise with |move| in either direction (implied vol would jump in sell-offs), so vega VaR is a lower bound.

- Dividends: flat continuous yields are owner assumptions (look-ahead flagged). A flat q ignores the April-May dividend season: it overstates dividends for the 3M options and understates them for the 6M options.

- Curves: single EUR AAA government curve (ECB) for discounting and EURIBOR projection: not a swap curve, no EURIBOR-ESTR basis, no cross-currency basis. JPY is flat below 1Y (no money-market input).

- EURIBOR fixings are a curve-implied proxy, recorded once on each fixing date.

- Options are hypothetical European cash-settled contracts with bespoke expiries and exact percentage strikes (listed-contract multipliers): not listed-contract replication. Strikes are shown as % of the trade-date spot; index moves as % returns.

- P&L; explain uses Greeks of t-1 and the period theta (revaluation from t-1 to t with the market held at t-1: constant zero rates per tenor, so roll-down is included). Theta 1d in the Greeks table is the one-day value. Step attribution is order-dependent.

- Backfilled report: market data was fetched after the report date (retrospective fetch timestamps; values are those published for the date).
